

set up deployment computer

determine what machines you want in your distributed system

invent credentials and secrets

setup ansible file structure on deployment computer

**Deploy your system to all machines**

entry /  
ensure you are in your deployment directory

issue deployment command:

```
$ ansible-playbook -K miros_rabbit_install.yml --ask-vault-pass  
BECOME password:  
Vault password:
```

Assumption:

This procedure assumes sudo password the same on all machines in your distributed system
